

### **Remarks**

In deference to the position of the Official Action that the claiming of pigments of more than about 4 percent is so broad as to be anticipated and suggested by the references, all of the dependent claims are amended here to limited the pigment to the range of about 4 to about 4.5 percent by weight. The 4 percent was in the original claims. 4.5 percent is in the magenta and yellow formulation of Table 1 and the claiming of about 4.5 percent is consistent with the original claims of more than about 4 percent.

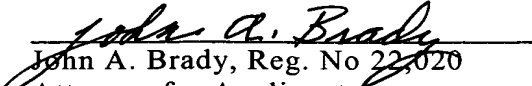

In claim 1 and extraneous comma is deleted after "methacrylate," which was in line 7 of the original claim 1.

The claims remain quite detailed in other respects and now differ from the references applied by claiming significantly higher pigment in a limited range than the specific examples of the references. As stated at page 2, lines 3-5 of the specification: "This invention describes a pigmented inkjet ink set with good color that provides excellent light and water resistance while maintaining excellent jettability in a high resolution, 3 nanogram (ng) drop mass printhead."

Accordingly, reconsideration is respectfully requested, followed by allowance of claims 1 – 15, all of the pending claims.

Respectfully submitted,

Charles Edward Akers, JR. et al.
